EDUCATION

National Polytechnic University
of Armenia 2020-2021

SKILLS

Linux System Administration
- User & file management
- Bash scripting
- Service & process control
- Package management (apt, yum)
- System monitoring & logging

Networking
- TCP/IP, DNS, DHCP
- Firewall basics (iptables)
- Network tools (ip, ping, traceroute, netstat)
- Switch and access point configuration
- Network cable installation and troubleshooting
- Internet connectivity troubleshooting for client PCs
- VoIP configuration and basic network setup

Frontend Development
- HTML5, CSS3, JavaScript
- React.js, Vue.js, Sass

Other Tools
- Vim/Neovim
- VS Code
- Terminal/CLI usage
- Git & GitHub

About Me

I am a 23-year-old IT enthusiast with 1.5 years of front-end web development experience. Currently, I'm fully focused on becoming a skilled Linux and Windows system administrator, building a solid foundation for a career in IT infrastructure and security. I made the decision to leave university to fully dedicate myself to self-directed IT education and hands-on learning.

Experience

I'm an aspiring System and Network Administrator with 6 months of experience. Throughout this 6-month role (with the first 2 months as an intern), I worked on troubleshooting and resolving issues related to printers, file sharing, DVR/NVR cameras, switches, servers, and wireless access points. I also assisted with VoIP configuration, internet connectivity issues on customers' PCs, and network cable installation. This experience strengthened my practical understanding of network infrastructure, system troubleshooting, and IT support in real-world environments.

System Administration & Networking Skills

I have a solid foundation in Linux system administration, including user and group management, file permissions, process and service management, Bash scripting for automation, and configuring system services. I'm proficient in networking fundamentals such as TCP/IP, DNS, DHCP, and firewall basics, with hands-on experience using Linux networking tools like ip, netstat, and iptables.
Additionally, I'm familiar with system monitoring, log management, package management, and security best practices.
I'm actively building skills in infrastructure automation and Linux security to develop a strong career in IT systems and network administration.

Frontend Web Programming Background

I have 1.5 years of front-end web development experience with proficiency in React.js, Vue.js, Sass, HTML5, CSS3, and JavaScript, along with skills in Git version control. I have developed several personal projects focused on clean design and usability, and I hold a Certificate of Excellence from Basic IT Center.
